

Simplified Creation of new Measurement Places in Device to Web

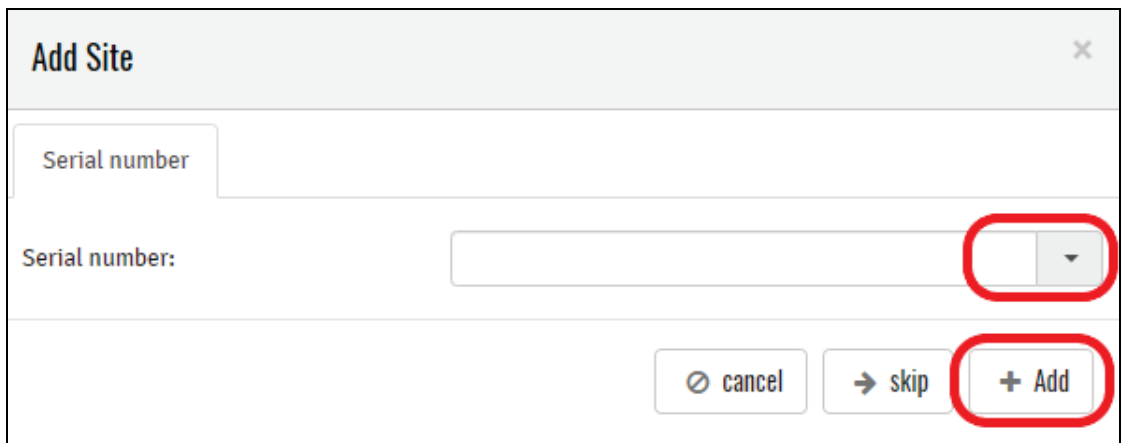

The new server software allows for quick and easy creation of new measurement places starting with version 47.x.

➡ Procedure:

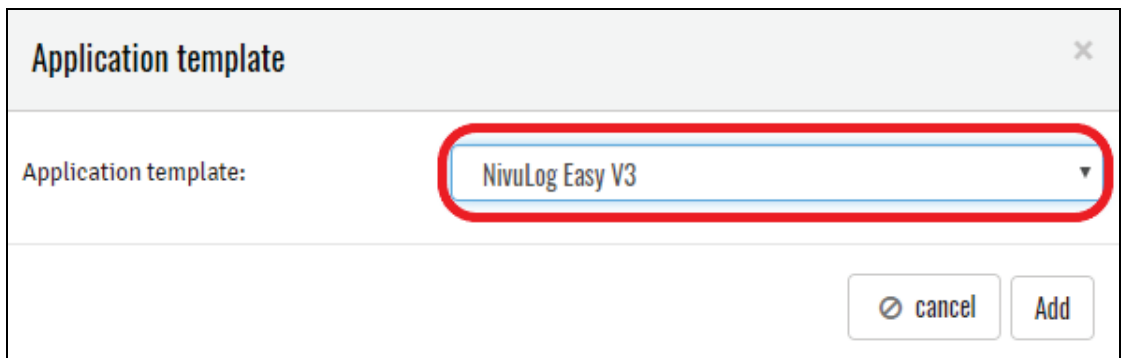

1. Click “+” symbol in Sites / Applications.

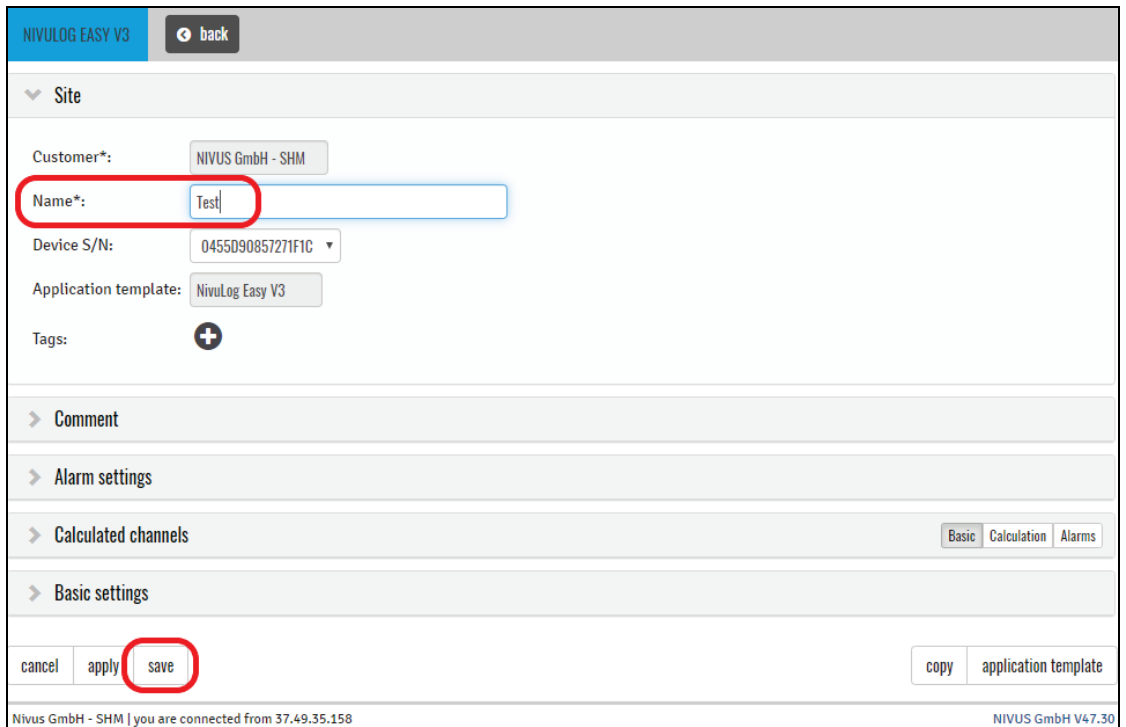

2. Open the serial number pulldown menu and select the serial number of the according data logger.
3. Accept and add the selected data logger using “+ Add”.

4. Choose a suitable application template from the pulldown menu, in this example NivuLog Easy V3.
If none of the available application templates found in the selection fits **perfectly** with device and application, alternatively select “Standard”.

5. Type in the name of the measurement place and save.
The measurement place is now created and available in the overview.

The screenshot shows the 'NIVULOG EASY V3' interface. At the top left, there is a 'back' button. Below it, a 'Site' section is expanded. The form contains the following fields:

- Customer*: NIVUS GmbH - SHM
- Name*: Test (highlighted with a red circle)
- Device S/N: 045509085721F1C
- Application template: NivuLog Easy V3
- Tags: +

Below the form, there are sections for 'Comment', 'Alarm settings', 'Calculated channels' (with sub-tabs for Basic, Calculation, Alarms), and 'Basic settings'. At the bottom of the form, there are buttons for 'cancel', 'apply', and 'save' (highlighted with a red circle). To the right of these buttons are 'copy' and 'application template' buttons. The footer of the interface shows 'Nivus GmbH - SHM | you are connected from 37.49.35.158' and 'NIVUS GmbH V47.30'.

6. Proceed configuring the measurement place.
